## 2. Post-Cardiac Arrest Care Algorithm

This clinical pathway is intended to supplement, rather than substitute for, professional judgment and may be changed depending upon a patient's individual needs. Failure to comply with this pathway does not represent a breach of the standard of care.

- If patient is stable, consider immediate transfer to a Critical Care Unit (ICU)
- For patients who are comatose after cardiac arrest (i.e., lacking meaningful response to verbal commands), temperature should be monitored continuously, and fever should be treated aggressively with a target temperature between 32°C and 36°C maintained constantly for at least 24 hours.
